

NIPPON POP RIVETS AND FASTENERS LTD.

NIPPON POP RIVETS AND FASTENERS LTD.

Company Description

Nippon Pop Rivets and Fasteners Ltd. manufactures a wide range of fastening systems for the Japanese market. For many years, we have been providing our customers in Japan from metal products such as POP rivets and POP nuts, to plastic clip products that are widely used in motor vehicles, and welding products such as the drawn arc welding machine and studs that have unparalleled welding power. We have also established a system for providing a stable supply of products to Japanese customers abroad with our network of agents and membership in the Stanley Engineered Fastening Global Network.

As a maker of industrial fasteners, in order to stay in business, we must manufacture products that will satisfy our customers. To that end, the Marketing and Design and Manufacturing Divisions must never lose the creative originality when it comes to developing new products, and the Manufacturing Division must further improve its manufacturing technique and product quality. One other thing that we must never forget is that the role of the maker is to further expand its product applications in order to enlarge its market.

As we aim to take even greater leaps forward, we will always keep these conditions for our survival in mind. We look forward to your patronage in the future.
