

N.E. CHEMCAT CORPORATION

Company Description

For about 60 years since its founding in April 1964, N.E. CHEMCAT has been contributing to the efforts to solve environmental issues such as air pollution, through its exhaust catalyst business and precious metal recycling business.

Furthermore, given the increasing global call for action to address the ever-intensifying environmental issues such as global warming and marine pollution, and various social issues, we expect to play an even greater role in addressing these issues, by leveraging our diverse portfolio of catalyst technologies.

In order to play our part in solving environmental issues and social issues, we will be looking to fulfil the mission and responsibility placed on us by working towards Vision 2030, our long-term vision, while remaining true to our corporate philosophy: to contribute to achieving a sustainable and quality global environment and affluent society through chemistry.

And going forward, we will continue to pursue a sustainable approach to management, with a view to becoming a company that meets the society's expectations by contributing to the attainment of a sustainable society, and continues to grow at the same time.
