

LUCA Japan Company, Limited

Company Description

What is LUCA?

First alternative investment platform in Japan

Access to alternative investments has long been limited to institutional investors due to the complexity of the investment process. LUCA, the first alternative investment platform in Japan, streamlines this investment process through digitalization, making it possible to provide investment opportunities to a wider range of investors, including individual investors, by completing the process in one-stop.

Furthermore, as the market becomes more scalable through digitalization, the minimum investment amount for overseas alternative funds, which is usually said to be 500 million to 1 billion yen, can be lowered to tens of millions of yen or less.
