

HENNGE K.K.

Company Description

Harness the power of transformative technology

In a world of constant change, HENNGE harnesses the power of transformative technology and makes it accessible and secure for all.

HENNGE is the number one cloud security provider in Japan. Since we started our business in 1996, we have faithfully worked on how we can make the world better with our new technology.

Our concept of “liberating technology” harbors the hopes that more of our customers can benefit from high-end technology, including ours; we believe it can change the world better.

Through technology, we’d ultimately like to make new values and contribute to the world economy. Also, we are sure it will return us a bigger benefit from expanding the world economy when we pursue common good other than monopolistic trivial gain.

“Accept the present needs and create original but practical solutions.”

“Invigorate the Japanese IT industry and distribute the interest to as many people as possible.”

These are the first step to our goal, which will prove our desire to the intellectual horizon as well.

As we have done, we will never stop being creative in the future.
