

Evatec K.K.

Company Description

Evatec - shaping the future

Evatec thin film technology, in our offices, our homes, our cars and our smart devices. We might not see them with the naked eye, but the thin films made on our machines are everywhere. Evatec technology has been shaping the world for 70 years since the foundation of the Balzers AG company in 1946 and now Evatec know-how will enable a revolution in how we live and work. The Internet of Things (IoT) offers the potential to connect 7 trillion devices across a global population of 8 billion and Evatec thin film technology will be at its heart. The devices we enable touch the lives of millions around the globe, delivering mobile communications like 5G that run faster and electronic consumer devices that use less power to save the world's resources.

From HB LED lighting for our automobiles to Face Recognition technology for our mobile phones, designing and building the best thin film production solutions is our daily business, and the Evatec know-how gives our customers the lead across a whole range of applications in the semiconductor, optoelectronics and photonics industries. Our coating technologies enable deposition of new materials, bring advanced process control for new levels of film performance and come with innovative system engineering for the lowest production costs.

Tomorrow's smart technologies like artificial intelligence (AI) that sense, learn and respond to their environment will make remote healthcare accessible to millions for the first time and enable autonomous driving for a safer world. All these developments call for leaps in sensing, computing and data processing, all at higher speeds and efficiencies, all in electronic packages of smaller size and weight, and Evatec is ready. A highly skilled team of scientists and engineers armed with a portfolio of 400 patents are ready to support our customers around the globe delivering production solutions for the future.

Company Details

Head Office

Switzerland

Main Business

半導体製造装置の製造

President

陳 永生
