

aetherAI Co., Ltd.

Company Description

A New Era.

AI - empowered Digital Pathology

Pathology is the study of disease. Until recent years, the traditional practice of pathology has remained largely unchanged over its 150-year history. This traditional practice is not only manual, but is prone to inaccuracy, error, and inefficiency.

Advances in technological development and the disruption caused by the COVID-19 pandemic mean the need for digital pathology has taken on greater urgency. However, a digital transformation of healthcare without comprehensive AI integration will remain incomplete and of limited scope. Pathologists need the insights of AI-assisted data analysis to improve the efficiency and accuracy of their diagnostic support.

AI - driven Digital Transformation for Pathology

aetherAI provides solutions for digital pathology and AI-powered diagnostic support to help pathologists perform more effectively, realizing the true potential of the digital transformation.

aetherAI is committed to developing web-based digital pathology platforms for clinical reporting and AI research and development. Our offering includes a web-based digital pathology image management and viewer system, image annotation services, AI model construction, and an integrated AI-powered workflow. aetherAI takes comprehensive care of all digital pathology AI development needs. In collaboration with aetherAI, you can take advantage of the following features.
