

ATEX CO.,LTD.

Company Description

We have been doing our best to manufacture under the motto of "sincerity, trust and creativity", since our founding in 1934. After World War II, we entered the agricultural machinery manufacturing industry to contribute to increasing food supply and we have been developing a wide range of products ever since. In 1989, we made a successful entry into a new field of production with the electric wheel chair "Mypia", by combining new technology and the know-how we had already developed. Now we have been growing up to be ranked the 2nd among the industry. In addition, we launched the industry's first hybrid remote controlled brush cutter "Kamigari" in 2019.

We will enthusiastically try and do our best as a developing company to continue to expand our business and contribute to the realization of a sustainable society by providing products which will impress.
