

OBTON

Obton Japan AM G.K.

Company Description

Obton has been part of the solar PV business since 2009. This means that we have accumulated unique knowledge about the many processes that belong to development, investment, financing and operation of solar PV systems parks.

We have completed a lot of deals resulting in over 1500 PV projects, and the experience gained from each project has made us a flexible organisation that is capable of implementing a variety of different project types.

We respect that every contract, agreement and construction is unique, so we use our flexible toolbox to find the solutions that are exactly right for all stakeholders in any given case.
