

Retail AI, Inc.

Company Description

Creating a truly personalized shopping experience in physical stores.

Provide truly personalized shopping experiences in brick-and-mortar

At Retail AI, we have developed a series of products and technological solutions, which together we call SMART STORE TECHNOLOGY. This innovative technology adapts to the reality of retail, making it possible to dramatically change the shopping experience in even the least modern store. Our experience in the retail sector has given us an insider's view of the industry and the ability to create a real and adaptive 'smart store' solution. Through AI, we combine accumulated data, including the customer's purchase history, or visual information about the purchase choice, thus offering the customer what they want and when they want it.
