### Job Description

Duties will include, but not limited to:

- Request management – process tickets as per agreed service levels of the client.
  - Including proper hand over of the assigned responsibilities during leave or absence
- Coordinate and provide both scheduled and unscheduled troubleshooting support.
  - Including occasional 24/7 dispatch managed within the team
  - Including occasional domestic business trips
- Install, move, add, and change server and other hardware in data center according to request from the client (e.g. break/fix, smart hands, decommissioning).
- Physical network support and cable management (e.g. cable construction work, power management)
- Escorting vendors and visitors inside the data center.
- Manage backup tapes and media operation.
- Capacity management and forecasting (e.g. space, power, cooling, ports).
- Site logistics support (e.g. receiving, relocation, shipping and disposal of equipment).

- Asset and stock management (e.g. tracking the inventory of spare parts, cables, kits).
  - Contribute to project and program activities as necessary.
    - Including involvement in a project work stream as required
  - Document and maintain updated processes/manuals.
  - Comply and enforce internal policies, processes and standards.
- 

## Required Skills

- 2+ years of hands on experience as an IT infrastructure engineer (server, network, IT asset management, etc.).
- Experience working for a data center or equivalent (i.e. server room) is required.
- Cisco certifications (CCNA or CCT) are referred.

## Language

- Japanese: N2 level
  - English: Business level
-
