Job Description

[About the Company]

The company is a start-up IT venture that aims to create a digital infrastructure for alternative assets.
Currently, the company is trying to build an illiquid asset platform in the real estate industry, which is one of the alternative assets.
However, they believe that this is a "pathway to the worldview they are aiming for.
They are currently working on seamlessly promoting digitalization in the real estate domain, based on the hypothesis that investment demand for alternative assets will increase in the future, and their future business development will be based on this hypothesis.

Specifically, wine, art, laundromats, and solar power generation can be considered.

About the Services
①Mobile App
It is a mobile app for real estate owners that enables easy management of income-producing real estate regardless of location, whether at home or on the road. It helps to realize better investment.

②Business Platform
A digital platform connecting property management companies and owners.
Owner communication using mobile apps improves the efficiency of management operations and reduces costs.

③Asset Management
Real estate professionals support inbound real estate investment.

They are currently based in Tokyo, Shanghai, Taipei, Hong Kong, and New York.

【Job Description】

[Background]
The Data Connectivity team is responsible for importing large amounts of data from third party sources into their system. This is an essential part of the company's future and is rapidly growing in scale. To do this they host and support many applications and systems using Python, Apache Airflow, PSQL, and AWS. You will work closely with other development teams and closely with the business side of the business.

[What You Will Do]
- Design, develop and test new features
- Improve scalability
- Onboarding new clients
- Identify and fix problems
- Suggest improvements and ensure implementation
