Job Description

[About us]

With the mission of contributing to society by creating jobs in the local community, we have developed and operated our own travel booking site "skyticket" where you can search and book cheap flights, hotels, etc.

The app released in 2015 has exceeded 20 million downloads, and has continued to remain profitable even during the COVID-19 pandemic despite being in the travel industry. In June 2023, we achieved our highest profit ever, and have expanded our overseas subsidiaries to six countries.

With over 50% of our employees being of foreign nationality, we are establishing a global development system.

[Attractiveness]

- Increasing number of talented members are coming to Japan in search of a global environment, including employees from Amazon headquarters, Accenture, and Salesforce, as well as those using the Future Creation Talent System.
- By working in both Japan and the UK and being able to work in a diverse environment, you will have the opportunity to hone your QA skills and increase your market value.
- We are also proactive in creating new businesses, such as releasing three new services after 2023.

In today's environment, where AI is growing rapidly and simple QA skills alone are no longer enough to guarantee market value,

I believe that there are many challenges to be faced by highly motivated individuals seeking global experience, which is an advantage, especially in Japan.

Depending

on your experience, you will be expected to carry out the following duties:

- Test planning and design for development projects
- Conduct quality verification tests on deliverables, decide whether to release them, and give instructions to the development team for improvements
- Selection of processes, techniques, and tools related to quality assurance across the entire group, including overseas subsidiaries, and planning and implementing test strategies on-site
- Identifying bottlenecks in quality improvement and considering/implementing ways to resolve them (improving the development process in cooperation with PM/PMO, etc.)

What you can gain from this job:

- Experience in overseeing basic quality assurance work from upstream to downstream
- Experience as a leader in working with people of various nationalities in a global organization
- This is a challenging opportunity to not only manage work based on set standards, but also to set quality standards in line with the expansion of the organization/business.

[Technology Stack]

- Frontend: Vue.js, React, jQuery
- Backend: PHP, Go, Java
- Database: MySQL, PostgreSQL, Cloud Spanner, Redis
- Infrastructure: GCP, AWS
- Editor/IDE: Visual Studio Code
