Job Description

[About the Company]

The company has created a security camera service that can be easily accessed via Internet. Using video to reduce labor and improve communication. Its use as a content distribution solution that is expanding at various sites, including chain stores and construction sites.

Currently, under the vision of "creating the future from video," they need to acquire data from the video as well as video

distribution.

Therefore, the future of "AI x video data utilization" such as traffic congestion prediction and store visit analysis is being created. A video platform that can be used by any technology and that can be used by anyone from companies to individuals

◎ It is a venture company established in October 2014 ◎

The company developed and provided easy-to-use video services, and in 2017 they achieved the top market share in the cloud camera service industry. Reduce human labor, eliminate human anxiety., generate human time and will continue to pursue smarter cameras.

[Job Description]

●Recruitment Background

With the vision of "creating the future through video," the company is developing solutions based on a cloud video platform.

The mission of this position is to measure and ensure quality from the client's and customer's perspective with an objective point of view.

In this position, you will be responsible for quality control from upstream to downstream of the project, including testing operations from test planning to test execution, and quality control operations from product requirement definition.

The company is looking for a QA engineer to support the development of the product in order to promote the development of new functions and services in a short cycle, more in touch with the challenges of the customer industry!

●Responsibilities

- Design and execution of test cases for web applications and native applications
- Implementation of automated testing for the above
- Formulate measures to improve product quality, from requirements definition to release
- Analyze defects and provide feedback to the project, etc.

●Attractiveness of this position

The company develops camera devices, servers, mobile applications, web applications, and server applications almost entirely in-house, and the products of these developments are all used in its services.

In this position, you will not only be a tester, but also be involved in making proposals and specifications that contribute to product specifications and design specifications, while communicating with development and business departments on the side of such all-in-one development from the edge to the cloud.

In addition, members of the team can also be actively involved in the selection of tools and other activities at their discretion. For example, there are some cases where we have started implementing Autify and Magicpod as test automation tools, and the environment is one where you can utilize a wide range of skills in collaboration with your team members and where challenges are encouraged.

●Environment

G Suite, JIRA, Office , Slack, Autify, Magicpod, Postman, various CI/CD tools, etc.

●Technologies/Tools Used

Development Languages

Python, Java, Go, C++

Infrastructure

AWS

Databases

MySQL, Redis, Elasticsearch, DynamoDB

Configuration management tools

Ansible, Terraform

Monitoring

Prometheus, Grafana, PagerDuty, StatusCake

Sentry, CI/CD, Github Actions, Circle CI

Others

Github, Docker, Fluentd, Fluent Bit, Redash

[Working Hour]

Discretionary Work System

[Welfare]

- Full social insurance
- Commuting allowance
- Free drink
- Proximity rent allowance (only for residents within 2 km from the office or within 2 stations)
- Book purchase assistance
- Study session, seminar participation fee assistance
- Multi-department exchange lunch assistance
- Side work is possible

[Holiday]

- Saturday/Sunday/National Holiday
 - Annual Paid Leave
 - New Year Holiday
- etc.
-

Required Skills

[Required]

2+ years of experience in designing/executing tests for Web App/Web API or Mobile App (iOS, Android)
JSTQB Foundation Level certified or have equivalent testing knowledge
Interest in quality assurance of self-developed products

[Preferred]

*Experience in one or more of the following is welcome
Experience in project management, project participation and team leadership, or equivalent
1+ years of experience working for a business company with its own products and services.
Experience in developing and implementing quality assurance standards for the company's products.
Expertise in OS, middleware, networking, etc.
Knowledge of DB, SQL, and the ability to write simple queries.
Experience in test automation using Selenium and other tools.
Experience in temperature characteristics testing and radio frequency measurement testing of hardware products.
Experience in camera product design and development projects, preferably from an IP camera manufacturer.
Knowledge of video and audio compression technologies and file structures.
