Job Description

[About the Company]

The company was launched in July 2002 as a venture company originating from Hosei University. Since then, the company has been operating with graphics technology as its core business, and currently provides consistent AI solutions from algorithm software to hardware or from edge to cloud in three businesses: IP core license business, product business, and professional service business.

[Job Description]

- R&D and product development work related to AI, especially image recognition (machine learning, deep learning, image processing, image recognition, etc.)
- Design, development, and testing of applications that incorporate AI technologies
- You will be responsible for the following tasks related to the progress of the project
- QCD management of projects under development
 - Manage the status of multiple projects based on schedule, tasks, and resources
 - Under the direction of the project manager, monitor compliance with standard project processes and promote corrective actions.
- Share project status with overseas teams (English reading and writing required. Good conversational skills are a plus)

★The position is for an application engineer, but you can acquire knowledge about AI through the development of AI-related products.

[Working conditions & treatment]

Flextime System
 Defined Contribution Pension Plan
 Kanto IT Software Health Insurance Association
 Benefit Station (over 800 e-learning courses, discounts on movies, travel, etc.)
 Employee Stock Ownership Plan (20% incentive)
 Stock compensation system
 Awards system, etc.

[Holidays and Vacations]

Paid leave *Number of days granted varies depending on the time of entry into the company in the first year
 Two days off per week (Saturdays and Sundays), national holidays, year-end and New Year holidays,
 Summer vacation (3 days), parental leave, congratulation or condolence leave

Required Skills**[Required]**

- Experience developing applications for JAVA and Android
- Experience in coding, testing and debugging in C/C++, Python and Java. Experience in coding, testing, and debugging using C/C++, Python, and Java, as well as experience in creating and compiling documentation related to these.
- Knowledge of OS development such as Linux and BSP
- Experience in project management of AI (less than 7 years of experience is acceptable)
- Language:
 - Japanese: Business level
 - English: Daily conversation level (reading and writing emails and papers)
- Mathematical background: Mathematical education required to read AI-related papers and understand algorithms (basic knowledge of university science)

[Preferred]

- Experience in developing picking arms and autonomous driving robots
- Experience in product and PoC development using deep learning technology

[Ideal Applicants]

- Interested in new technologies and willing to learn new skills
- Proactive in promoting the results of their research and development to customers.
