Job Description

【About the company ...】

The company's mission is to "make people happy through mobility," and provides IT services that update the mobility industry, including cab apps and next-generation AI drive recording services.

▼ Service List

■Cab App

This cab dispatch application was created by integrating "JapanTaxi" operated by Nihon Kotsu and "MOV" operated by DeNA. Although this application is based on MOV, it also allows users to request cab dispatch from cab companies that had partnered with JapanTaxi.

■Next Generation AI Drive Recording Service

AI-based drive recorder constantly analyzes driving. It automatically detects various risky driving behaviors that may cause accidents, such as looking aside or failing to stop for a moment, and leaves a video record of the accident. Based on AI-detected video and analysis data, specialized personnel dedicated to safety management will work with your company's team to help prevent driving accidents and improve operational efficiency.

■Cab App Corporate Services

In addition to cab ordering, the system includes corporate functions such as expense reimbursement. In addition to visualizing information on employee cab usage, the system also allows for more efficient expense reimbursement through invoice payment.

Areas covered will start from Tokyo, Osaka, Kyoto, Hyogo, Aichi and some other areas.

【 Job Description 】

You will be involved in improving the CI/CD environment for in-vehicle Android applications, automating testing, collecting and visualizing metrics useful for development and troubleshooting, and working with customer support and development engineers to build an environment that enables the identification of issues and their improvement.

The cab dispatch service "GO" has not only a smartphone application for users to use, but also an in-vehicle system that runs inside the cab vehicle. The in-vehicle system functions by linking the Android application with several devices. The purpose of our work is to improve the quality and delivery of this in-vehicle system.

【Issues to be developed】

- Establish a safe and secure delivery environment and operational flow
- Preventing and improving development efficiency
- Preventing and improving system quality

【Development Environment】

Programming languages: Kotlin, TypeScript, SQL

Libraries: Android Jetpack, Kotlin coroutines, Appium, Firebase, GCP, BigQuery, etc.

CI/CD: Github Actions, Bitrise

【 Working time 】

Flextime System

【Holidays】

- Saturdays, Sundays and National Holidays
- Paid leave (up to 10 days in the first year, depending on the month of employment * Granted on the date of employment)
- New Year vacations
- Celebration and condolence leave
- Nursing care leave (5 days per year per family member in need of nursing care)

【Welfare】

- Full social insurance
- Trial cab system (10,000 yen/month): Company pays for a ride to get to know the cab
- New Normal Allowance (3,000 yen/month)
- Welcome Lunch
- Subsidy for book purchases
- Participation in technical conferences (in Japan and abroad)
- Club activity system
- No dress code

Required Skills

【Required】

Meet all of the following

- Experience in software product development and operation
- Experience in Android application development (both business and private)
- Experience in implementing automated testing
- Experience with Git

【Preferred】

- Experience in implementing E2E testing for Android applications (e.g. Appium)
- Experience in building and operating CI/CD environment
- Experience in quality assurance
- Experience in hardware development
- Experience in public cloud operations
