Job Description

【ABOUT THE COMPANY】

Sale of safe foods and food ingredients, such as organic vegetables, specially cultivated agricultural products, and additive-free processed foods, to the general public through websites and catalogs.

In 2017, two companies merged their businesses, and in 2018, another company was added to create a group. The company is taking a leap forward in a sustainable society by providing a service that allows many people to enjoy a better diet and by creating a system that rewards and makes producers of good food proud.

The company's main business area is a value-propositioned food e-commerce business, such as meal kits that meet the needs of busy customers, such as organic and specially cultivated fresh food, processed food with minimal additives, and other products that are safe and secure. In addition, they are solving social issues related to food through our business, such as wholesale of foodstuffs to nursery schools, consulting and media business using our e-commerce know-how, and mobile supermarkets that serve as infrastructure for living in depopulated areas.

Now that the company has entered its second decade of business, it will continue to provide a better dietary life for producers and customers through new initiatives and tricks, such as strengthening the products and services of each brand, establishing a new large-scale distribution center, and building a logistics system.

【JOB DESCRIPTION 】

■Vision / Aim
Continuing to create a sustainable food future
Under the corporate philosophy of "Future Dining, Future Farms," the company aims to realize a sustainable society by constantly evolving methods to connect people who eat and produce food.

For the company, solving social issues related to food through business methods is the mission and value it provides. Therefore, each member's contribution to the business performance and strong sense of ownership leads to the growth of the entire business, which in turn leads to the solution of social issues. In this environment, members of the company work on their missions while always synchronizing their personal growth with their contributions to society.

Through further expansion of the business, the company will create a better society, a sustainable society, and create and expand the future of food.

■Team Mission
For EC sites, it is essential to provide a pleasant purchasing experience.
"Oisix," a regular food delivery service, was born in 2000 after much discussion about what kind of business would benefit society, and has now grown to become the largest food delivery EC service in Japan with more than 360,000 regular members (as of the end of January 2023).
In order to ensure that Oisix customers can use the service comfortably, the company provides a wide range of services, from eliminating the technical debt of existing systems to building a new system infrastructure to support business growth. They are looking for people who can work with them to define the "ideal" from the customer's point of view and respond to changes in the market.

■Responsibilities
(You will be assigned appropriate tasks based on your experience and orientation)
・Construction, requirement definition, design, and development of system infrastructure related to functional improvement of e-commerce sites.
　(e.g., development of functions that integrate with external services, development of new services for members, database load reduction, etc., batch processing performance improvement)
・Architecture design considering performance and scalability to ensure stable operation even during peak access times.
・Building a robust system to deliver to customers every week, and ensuring quality by automating code reviews and tests.
・Control of planning in team development, including team leading and self-management in development projects
・Making technical suggestions and improvement proposals to improve services in collaboration with other departments and teams

■Project Examples
You will work in a cross-professional project team. Participation by one or two back-end engineers, projects with a development period of about six months are the norm, or two or three months in the case of smaller projects.

■Attractiveness of this position
・You can be involved from the early planning stages in building the system infrastructure for a large-scale project that will support the company's future.
・You can challenge yourself with many challenges as an engineer, both in terms of peak traffic and data.
・You can work on solving social issues related to food in a food subscription service with over 300,000 members.
・You can make use of your wide range of business knowledge and experience, not limited to EC, MD, order management, inventory management, logistics, etc., as we are developing these systems comprehensively in-house.
・You will be able to broaden your activities as an engineer because you will be able to experience not only system development but also service design.

■Technical Environment
Kotlin, Java
Spring Boot, OpenAPI, Doma 2
Oracle, MySQL, DynamoDB, Redis, Kubernetes (all on AWS)
GitHub Actions, DataDog, Backlog, GitHub Projects

New Year Holiday
Parental Leave
Nursing Care Leave
Congratulations & Condolence Leave

Required Skills

【Required】
・3+ years of experience developing web applications (Java + Spring Boot)
・Experience in designing and developing cloud-based systems
・Experience using version control tools (Git)
・Knowledge and experience in designing, developing, and reviewing applications with an awareness of fault-tolerance and maintainability

【Preferred】
・Experience in system development of web systems (Java), examining and proposing architecture from scratch.
・Experience in development using Java, Kotlin, Spring Boot
・Experience in building build and deployment pipelines using CI tools (GitHub Actions, Jenkins, JUnit, etc.)
・Experience building applications using cloud computing (API Gateway, Lambda, DynamoDB, etc.)
・Experience in designing, developing, and operating applications using container technologies (Docker, Kubernetes)
・Experience in improving development environments, etc.
