Job Description

[About the company]

Business description Sensors, measuring instruments
Image processing equipment
Control and measurement equipment
Analysis equipment for research and development
Business information equipment

[Job Description]**[Mission]**

The company develops sensors, measuring instruments, and image processing equipment for factory automation (FA). By accurately grasping what is happening at manufacturing sites and looking ahead, the mission of the company is to create products with new value that solve problems that customers are not even aware of yet.

Responsibilities**[Product Development Group]**

You will be responsible for specification study, design, implementation, and evaluation of PC applications. You will design and implement from various aspects such as development of user-friendly GUI, framework design considering large scale and large number of implementations, and quality assurance.

You will understand the customer's usage well, discuss with product planning and sales staff, and propose and implement optimal functions in cooperation with the circuit and structure staff.

■Rewarding

You will be able to develop products that are "world's first" or "industry's first" by creating solutions based on your technical expertise while keeping abreast of the latest technological trends.

By understanding the true needs of customers, you will be able to move development projects forward while discussing them with various technical members, including software, optics, and circuits.

After a product is released, you will be able to know the sales and sales volume every month, so you will know in real time how useful the product is. Furthermore, the products are integrated into the factory line, and you can hear directly from customers how pleased they are with your products.

Although it is a global company with operations in 46 countries around the world, you will work directly with sales teams to identify issues and develop products to resolve them through direct dialogue with customers, both domestic and overseas.

You will be involved in all phases of product development, from the product conception and planning phases to the creation of added value, to the proposal of functions with sales and support in mind. You will be able to work closely with the planning, specification, hardware, and structural development staff, and work as a single unit to address issues.

In addition to the usual reporting and communication, every three months there is an opportunity to discuss personal goals and career plans with the person in charge. After sharing the degree of goal achievement and recognizing areas for improvement, the employees set their own goals for the next three months. By repeating this process, you will be able to grow.

[Career Path]

You can hone your skills as a project manager or software development leader, including hardware, or become a specialist.

[Message]

The company welcomes people who can flexibly use both teamwork and self-actualization to make things happen. Let's work together to add value to our products through software.

[Working time]

08:30~17:15

[Welfare]

■Full Social Insurance

[Holidays]

- Saturday/Sunday/National Holiday
- Annual Paid Leave
- Congratulations & Condolence Leave

Required Skills**[MUST]**

- 1+ years of PC application development experience (C++/C#/Java)

[WANT]

- Knowledge of GUI and design
- Experience in web application and server development
- High performance in programming contests

Company Description
