Job Description

【About the company ...】

The company works to provide technologies that allow you convenient access and use of your data, while at the same time ensuring security and protecting privacy. Conventionally security has been thought to reduce functionality and increase costs – they are shifting the paradigm where security lowers costs and increases functionality and customer satisfaction.

The company is focusing on creating a society where knowledge can be shared freely, and data use can be sustainable. They are focusing on technologies that reduce data loss risk through privacy management and the protection of sensitive data – which also reduces profit loss and increases the transparency of AI data utilization.

①Secure computation software for databases that enables inter-company collaboration and computational processing of data in the encrypted state
②Secret Calculation Software allows your AI and ML models to be encrypted and to take advantage of secure computing.
③Secret Computation Package : safe and secure data access environment for projects with multiple organizations and stakeholders.

【 Job Description 】

The company is plaining to expand the team so that we can create a more production-ready product. They are welcome more talented engineers with passion to join the team

Developers take initiative to decide the project's direction to achieve various services over the Alchemista Platform while continuing the detail spec discussion in dev leaders and PMs.

Developers take initiative to decide the project's direction to achieve various services over the Alchemista Platform while continuing the detail spec discussion in dev leaders and PMs.
