Job Description

[About the company ...]

Embodying "Face to Face for Each"

The company believes that "human beings cannot live without communication." And economic activities and business are indispensable in building people's lives. That is why the company is committed to continuing to propose solutions to business

communication challenges.

The company develops and operates BtoB cloud services based on the theme of "communication," and its most focused service is "Re:iration," an inquiry response tool released in October 2014.

"Re:iration" is a SaaS for BtoB that contributes to improved business efficiency and quality of response by centrally managing multiple communication tools such as e-mail, SNS, and chat, and sharing them with teams.

It is used as an internal and external communication tool by a wide range of organizations, including e-commerce retailers, manufacturers, professional organizations, and others that often respond to customer inquiries, as well as those that have switched from general mailers such as Outlook.

The number of companies that have adopted the system has reached approximately 3,500, and its customers have expanded to include call centers, educational institutions such as universities, and customer support for major companies.

The company's customers range in size from a few people to large corporations. The satisfaction rate of the companies that have adopted the system is high, and the retention rate continues to be over 99%.

【 Job Description 】

Responsibilities

As for a Tech Lead, you will be responsible for overall architectural design, especially for "examining infrastructure specifications, investigating performance degradation, and studying measures to prevent its recurrence.

Responsible for implementation, addition of test code, review, verification, and other tasks necessary for product development in a cross-functional manner, without being restricted by job function.

Confirmation of specifications, performance degradation, investigation of defects, etc.

Technical research, library selection, component I/F and specification determination

Collaboration with PdM and designers

In most cases, agile development is conducted using Scrum as a framework. Tasks are assigned based on priorities determined by the product owner. Teams regularly review their work and work in a cycle of improvement.

You will also do what is necessary to improve the service and the team, such as hiring and technical research.

· Current Status of Front-End Development

Teams are being developed by dividing into teams for each main function of Re:ration.

Since Re:ration is a "Horizontal SaaS" that solves communication issues, each team adds and improves functions based on the PMFs of the main functions according to the industry and attributes of the customers.

· What you will be expected to do after joining the company

To improve the architecture level for errors, not limited to PROD/STG, and to think of ways to prevent the same errors from occurring.

Provide technical support to the team leader and follow up with the team members

Contribute to the engage and technology by presenting at internal and external study groups.
