Job Description

Top aerospace company is looking for airport system engineer. You will be responsible for supporting local airport remotely.

Client Details

Our client is a major player in the aerospace and defense industry. The company specializes in a wide range of products and services for both commercial and military aviation. They also work on advanced technologies for things like space exploration and industrial applications. If you're interested in the latest in aerospace technology, this client is a significant name to know.

Description

- Ensuring that airport systems (such as check-in, flight information display, and communication systems) are operating correctly. This includes diagnosing and resolving technical issues as they arise.
- Continuously monitoring system performance to identify and address any potential issues before they impact airport operations
- Providing remote technical support for airport staff and other users. This may include training staff on system use, helping with system configurations, and responding to technical queries.
- Assisting with the implementation of system upgrades and updates to ensure that all technologies remain current and functional. This can involve planning, testing, and deploying new software or hardware components.

- Working closely with other engineering teams, airport operations staff, and external vendors to coordinate efforts and ensure that systems integrate seamlessly with other airport functions.

Job Offer

- Opportunity for growth and advancement within the company
- A dynamic, energetic working environment
- Collaborative and supportive team environment
- Flexible work schedule and work-life balance
- Comprehensive training and professional development opportunities

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Ayaka Iwaki at +81 3 6832 8658.

Required Skills

- General knowledge of general IT infrastructure, including PC, servers, network systems,
- Strong problem-solving abilities to diagnose and resolve technical issues quickly and effectively.
- Understanding of network troubleshooting.
- Proficiency in managing and supporting both hardware and software systems, including familiarity with operating systems
- Ability to work collaboratively with various teams and departments, often under pressure.
- Willingness to work flexible hours, including evenings, weekends, or on-call shifts, as airport operations run 24/7
