Company Profile

- Our client is an innovative software company that help companies utilize their data by using AI.
- Depending on the needs of the their clients, they can provide quick visible results through data strategy planning, data infrastructure construction, system construction/implementation support and utilization/activation support.

The Role

- Transform customer pain points into actionable insights by leveraging robust data pipelines, dbt workflow and SQL.
- Development of new components and functions for the recommendation, search and ad delivery engines.
- Create solutions with clients to solve their business challenges
- Collaborate with different teams, such as product teams and business teams to achieve customer value and aim for project success
- Continuous performance improvement or design of the management screen, development, testing and deployment including technology selection

Development environment

- Cloud: AWS
- Development language: Kotlin, Python, Typescript
- Frameworks/middleware, etc.: MySQL, Elasticsearch, Redis, Snowflake, Micronaut, gRPC, Apache pulsar, Amazon S3, Bazel, Amazon EKS (Kubernetes)

Your Skills

- Experience in software development in one or more programming languages such as PHP, Kotlin, Python, C++, Golang, Java etc
- Good Japanese speaking ability (N2-N1)
- Ability and willingness to learn new technologies, tools, and programming languages as needed
- Example: Even if a language/framework with which you have no experience is used, you will be able to acquire knowledge and maintain and operate it within 6 months of employment.

Welcome experience:

- Experience in developing and operating APIs or web applications
- Development experience in web front-end programs using HTML/CSS/JavaScript
- Experience in defining requirements and making technical proposals with clients as an engineer
- Experience in front-end development using React and Next.js
- Experience in web development using cloud technologies (GCP, AWS, Azure, etc.)
- Development experience of services using MySQL and Redis

Location

- Tokyo

Salary

- 9,000,000 yen - 12,000,000 yen
