Job Description

As a Server Engineer, you will be responsible for the design, construction, and operation of DNS infrastructure, ensuring high availability and performance. You'll work on-premises to maintain robust DNS services for a range of applications.

Client Details

Our client is a prominent leader in the technology industry, providing a wide array of internet services that cater to a global audience. They are dedicated to delivering exceptional service quality and rely on cutting-edge technology to maintain their competitive edge. This role offers a dynamic and collaborative environment, ideal for individuals who thrive on innovation and teamwork.

Description

- Design, construct, and operate DNS infrastructure to ensure stability and availability.
- Oversee on-premise DNS operations, focusing on high-quality service delivery.
- Collaborate with cross-functional teams to make informed decisions that enhance DNS performance.
- Maintain and optimize DNS systems to support various internet services.

Job Offer

- A chance to work in a multinational team with opportunities for professional development.
- Exposure to advanced DNS and network technologies.
- A supportive work environment that encourages innovation and collaboration.
- Complimentary meals everyday at a cafeteria.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Naoko Toda at +81 3 6832 8648.

Required Skills

- **Experience:** 5+ years in DNS infrastructure design, construction, and operation.
 - **Technical Skills:** Strong understanding of on-premise DNS environments, with basic knowledge of UNIX and Linux.
 - **Soft Skills:** Excellent communication skills and the ability to think flexibly and act decisively.
 - **Language:** Business level in English, no requirement for Japanese level.
-
