Job Description

[About the company]

[Internet for all]

Since launching its Internet business in 1995, the company has been providing a variety of Internet-related services with the strong desire to "bring the convenience, fun, and potential of the Internet to as many people as possible."

- Internet Infrastructure Business
- Internet Advertising and Media Business
- Internet Finance Business
- Crypto Assets (Virtual Currency) Business

[Job Description]

[Responsibilities]

■Development

- Development of new functions associated with the provision of cloud services (IaaS)
- Design and build the configuration of equipment required for cloud services. Implementation of programs
- Technical verification of virtualization technologies (OpenStack, Kubernetes, Libvirt, Hyper-V, etc.)
- Configuration of tools required for operations (Splunk, Nagios, Zabbix, Influxdb, Grafana, Prometheus, etc.)

■Operation

- Maintenance of developed and constructed services, preparation of operation manuals for routine operations, and handover to the operation team
- Respond to various types of failures (basically by the operations and maintenance team, but if the failure affects the entire service, participate in the response)

■Rewarding

- You can be exposed to cutting-edge open source technology
- You can be involved in the construction of large-scale infrastructures
- You can experience the development of new services from the initial planning stage.
- Your opinion will be adopted as long as it is valid, regardless of your position.
- You can experience overseas projects. (Overseas projects are abundant)
