Job Description

[About the Company]

The company was founded in 1970 as an independent IT solutions vendor with two main businesses: embedded software development for automobiles and electronic devices, and business systems development for finance, manufacturing, distribution, and other industries. Moreover, the company has always responded to the demands of the times by adopting new technological trends through its product business, outsourcing business, and global expansion.

In addition to past initiatives, the company is focusing on cutting-edge initiatives in AI, IoT, security, cloud computing, robotics, and mobile automation, which are currently our priority technologies, as "AIS-CRM (ice cream)," while promoting the development of highly skilled human resources who can use cutting-edge technologies. In response to the shortage of IT personnel, which has become a social issue, they hire young people and strive to develop their business and human resources through solid corporate training and work placements.

As the pace of social change accelerates and the tides of the times change dramatically, they will provide their customers with security, profit, new technology, and added value, and as a professional ICT group, they will continue to follow the company policy of "challenge and creativity" and aim to become an "innovative corporate group that links ICT development to increased customer value," which is the mid-term policy.

[Job Description]

You will be responsible for proposal, requirement definition, design, development, operation and maintenance, etc. in various system developments (web applications, web services, C/S systems, etc.).

※You will be responsible for the most suitable tasks for various system development, taking into consideration your experience, abilities, and ambitions.

[Main Project]

○Large-scale system development projects mainly for manufacturing and public customers.

- Development of core business systems for design and production preparation, sales planning, procurement and logistics, etc.
- Development of information systems for customers' internal use
- Development of products using public cloud, etc.
- Cloud development related to IoT and AI
- Design/build/implement various Microsoft products and cloud services

[Attractions/Features of this company and position]

- The company develops a wide variety of business systems for major manufacturing companies, so you will have the opportunity to experience a variety of technical elements.
- Because there are a wide range of industries and products involved, you can specialize or broaden your skills according to the career you desire.
- A variety of work styles are available, including telecommuting and a flexible work schedule with no core hours.
- You can choose the career path that best suits your needs, such as cultivating project management skills and becoming a PM/PL, or honing your technical skills and becoming a specialist.
- There are abundant training programs (e-learning/face-to-face training) and in-house study sessions, and they provide an environment for young employees to learn management and technical skills so that they can quickly advance in their careers if they are motivated.
