## Job Description

Lead technical efforts to design, implement, and maintain a robust IT infrastructure. Focus on network and server operations, virtualization, security, and troubleshooting.

### Client Details

Our client is a prominent player in the automotive financial services industry, providing innovative financing and insurance solutions to customers. They are dedicated to leveraging technology to enhance customer experiences and maintain high operational standards.

### Description

- **Network Engineer:**
  - Provide network infrastructure services, including security, monitoring, and directory services.
  - Document network topology and configurations.
  - Troubleshoot network connectivity and utilization issues.
  - Develop technical specifications for purchasing networking equipment.
- **Server Engineer:**

- Manage storage, server virtualization, and system monitoring.
- Create documentation for server configurations.
- Analyze server outages and perform root cause analysis.
- Specify technical requirements for server procurement.
- Collaborate with global team members and stakeholders.

#### **Job Offer**

- Opportunities for professional growth and skill development.
- A collaborative and diverse working environment.
- Exposure to global projects and state-of-the-art technologies.
- Great work life balance: 2 days remote work.
