Job Description

Top insurance company is looking for server engineer who is responsible for managing server(Windows, Linux), in-house system. English is not required.

Client Details

Our client is famous company as top insurance company. They offer a variety of insurance products, including life insurance, health insurance, and non-life insurance. The company focuses on providing innovative solutions, often leveraging technology to improve customer experience and streamline processes.

Description

- Installing, configuring, and deploying servers and related hardware/software.
- Continuously monitoring server performance and making necessary adjustments to optimize speed and reliability.
- Diagnosing and resolving server issues, including hardware failures and software problems, and providing technical support to users.
- Working closely with development, networking, and IT teams to ensure seamless integration and operation of applications and services.
- Regularly applying software updates and patches to keep systems secure and up to date.

Job Offer

- A dynamic, energetic working environment with good work/life balance
- Open culture and job rotation available to enable internal career development
- Competitive salary and benefits package
- Opportunity for growth and advancement within the company
- Collaborative and supportive team environment

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Ayaka Iwaki at +81 3 6832 8658.

Required Skills

- Proficiency in server operating systems, particularly Linux (e.g., Ubuntu, CentOS) and Windows Server.
- Understanding of server hardware components and architecture.
- Understanding of security best practices, including firewalls, intrusion detection systems, and encryption.
- Ability to communicate technical concepts clearly to non-technical stakeholders in Japanese.
