Job Description

COMPANY OVERVIEW

My client is a Japanese IT system integrator focusing on bank industry.

JOB RESPONSIBILITIES

Conduct day-to-day Level 2 (L2) support for banking application software. If errors are detected by the bank's operations department (Level 1 support), you will need to find a recovery solution in collaboration with the outsourcing vendor, the bank's IT department, and, if necessary, the counterparty at the Head Office. This may require overtime if the issue occurs outside business hours.

Lead projects related to change requests from users or End of Life (EOL) issues such as operating systems, database management software, and hardware. You will be responsible for managing these projects.

Manage team members, vendors, and service providers. Develop project schedules and ensure all tasks are completed as required and planned.

Oversee project execution by resolving issues, controlling vendors and resources, managing schedules, and preparing reports for management, the bank, and the Head Office for approval if needed.

JOB REQUIREMENTS

At least 3 years of experience as an Application Software Engineer in the banking IT sector.
Diploma or Degree in IT.

Experience in application development within the banking IT sector, with a focus on high-level robustness in applications (Core banking, loans, and market systems etc).

Proficiency in programming languages (Java/Shell etc), RDBMS (Oracle/SQL Server etc), and OS (Windows/Linux).

Japanese language skills (reading/writing) are necessary, as applications are linked with systems in Japan. The development and maintenance of these projects require close collaboration with Japanese development teams and members, primarily through email.

Apply online or feel free to contact me directly for more information about this opportunity. Due to the high volume of applicants, we regret to inform that only shortlisted candidates will be notified. Thank you for your understanding.
