Job Description

Company About:

Our client is a 100% Japanese-owned company and a leader in Software Programming & IT Solutions. Their mission is to provide their clients with high-value technological solutions and services that will help them fulfill their business needs. They provide their technology expertise to find the best solution in the market to meet your business needs, following best practices in software development and a transparent process with frequent deliveries and reviews. Their solution package development team is always on the edge of technology, following global standard development and security processes, and developing the most advanced and competitive products. They also provide best-in-class E-Commerce solutions based on their extensive development track record by their professional staff specializing in E-Commerce systems, membership websites, reservation systems, and smartphone app development. Their E-Commerce system construction services improve their clients' business value and marketing performance with a unique and integrated E-Commerce platform solution

Job Overview And Responsibility

- As an Infrastructure Architect, you will lead the architecture and design of a variety of projects in a
- highly collaborative, fast-paced environment. Your role is to design innovative solutions to real market problems. This hands-on technical role requires strong object-oriented and software design skills.

Job Responsibilities:

- Identify and communicate the appropriate software architecture based on the requirements and design elements of existing and upcoming projects.
- Define the technology strategy in conjunction with the development team of each project: pipeline, tools, and key

development procedures.

- Assist and mentor Team Leaders/Senior Engineers in the creation of detailed software design specifications, including conducting training in software design where required.
- Support for estimation of new proposals.

Required Skills and Experience:

- Bachelor's or Master's degree in computer science or a related field
- At least 5 years of relevant experience in large software design and coordinating project teams.
- At least 6 years of Node.JS JAVA or PHP (object-oriented) programming experience.
- 6+ years of experience designing and developing database structures.
- Excellent interpersonal and communication skills
- Mastery of user interface design skills
- Experience in designing layered architecture (ex. MVC model)
- Skills in designing network (L2/L3 layers) are preferable
- Knowledge of virtualization technologies (ex. VMWare) and storage technologies (ex. NAS, SAN) is preferable
- -Knowledge of AWS technologies (SaaS, IaaS) is preferable

Why Candidate should apply for this position:

Here at TTV, we don't just offer you a job, we offer you a future. Here's your chance to get your hands on...

- Multicultural and friendly environment
- 13th-month salary.
- An annual project bonus of up to 2 months' salary is based on performance assessment.
- Private health care program for you.
- Special allowance for seniority employees, and leaders.
- Potential opportunities for onsite in Japan, and ASEAN.
- Care programs: Wedding, Close family pass away, Giving Birth.
- Flexible working time and place together with high-end working equipment.
- Free Drinking: Coffee and tea in the office.
- A company trip every summer, an annual yearend party, team building activities, and so much more fun are waiting for you!
