Job Description

Company and job overview

Our client is part of a 300-strong global delivery network, supporting around the globe.

Job Responsibilities

- Technical leadership and management for all aspects of the software lifecycle, including software engineering, support, and operation using Java, PHP, JavaScript, HTML, C++, C, C#, Web Services, AJAX, relational databases, and/or related technologies.
- Define SLA in relation to contract services, ensuring the SLAs are achieved, service quality & client expectations are met or exceeded.
- Effectively monitor, control, and support service delivery, ensuring systems, methodologies, and procedures are followed.
- Build and maintain client relationships both internally and externally.
- Attend client service review meetings covering performance, service improvements, quality & processes.
- To ensure that systems, processes & methodologies as specified are followed.
- To ensure effective monitoring, control & support of service delivery.

Job Requirements

- B.S. or higher degree in Computer Science or Information Technology (IT).
 - 10+ years of experience in software development and project management.
 - Significant previous experience and proven track record of managing the delivery of IT Projects.
 - Excellent knowledge of systems, software, technologies & suppliers to support business needs.
 - Strong experience in project management, software development process, and software engineering methodology such as RUP, iterative development, and Agile/SCRUM.
 - Innovative thinker – able to turn customer requirements into workable solutions.
 - Excellent time management skills.
 - Solid leadership skills are essential, able to communicate ideas to technical staff, business users, and the board of management with equal clarity.
 - Good Japanese and English speaking skills.
