Job Description

- Collaborate with Project Managers and Business Analysts to deliver end-to-end solutions for assigned projects.
- Lead communication with Regional/Lead Architects to gain approval for the final solution of the project while properly leveraging regional reference architectures, interfacing technical standards, infrastructure environment, broader integration strategies and business strategies.
- Solution Architects also develop or review high-level designs related to integration to deliver business solutions. Solution Architects are the primary architects of the solution architecture required to support their IT projects.
- Work closely with the Regional/Lead Architect to define shared components for the end to end solution and support the Regional/Lead Architect in the transition from shared system components to shared services operations.
- Working with project manager and business analyst to deliver end-to-end solution for the assigned projects.
- Leading communications with Regional/Lead Architect about and attaining approval for project final solution, with appropriate employment of regional reference architecture, Interfacing Technology standards, Infrastructure environment, broad Integration Strategy and Business Strategies.
- The Solution Architect will also develop and/or review high level designs around integration in concert to deliver business solutions. The Solution Architect will be the primary designer of the solution architecture required to support the assigned IT projects.

- Working closely with Regional/Lead Architect to define the shared components in the end-to-end solution, and support Regional/Lead Architect on the transition from shared system components to shared service operation
-
