#### Job Description

This position seeks an Embedded Engineer with a knack for innovative solutions and a passion for technology. The successful candidate will be responsible for the design, development, and testing of embedded systems in a fast-paced, high-tech environment.

#### Client Details

Our client is a large organisation in the Technology & Telecoms industry. They are known for their commitment to innovation and for providing their employees with opportunities for career progression and personal development.

#### Description

- Design and implement software of embedded devices and systems
- Collaborate with cross-functional teams to define system specifications
- Review code and design analyses
- Integrate and validate new product designs

- Evaluate and provide feedback on system performance
- Ensure that products meet quality standards and design criteria
- Stay abreast of advancements in the field of embedded systems

#### **Job Offer**

- A competitive salary range
- A robust benefits package that promotes work-life balance
- The chance to be part of a large organisation that values innovation and career progression

If you are passionate about technology and ready to take your career to the next level, we invite you to apply.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Shajka Erden at +81 3 6832 8638.

---

#### **Required Skills**

A successful Embedded Engineer should have:

- A degree in Computer Science, Engineering, or a related field
- 3+years experience in embedded systems and skilled with C/C++ programming language and worked in Linux environment
- Familiarity with Git/CVS etc.
- Strong problem-solving skills and an innovative approach to technology
- Business Japanese (JLPT N2) and Conversational English

---

#### **Company Description**

Top tier, multinational consumer product producer firm
