Job Description

- Design and implement the architecture of the next generation of automated infrastructure.
- Implement automation to continuously reduce toil for Customer operations using CI/CD processes.
- Create and maintain customer cloud environments.
- Work Closely with DevOps, support, and development teams.
- Be part of a team that introduces new technologies and deploys services to multiple cloud environments and regions.
- Solve technical problems, guide various teams (internal & external), and continually improve our systems, deployments, operations, monitoring, and overall cloud activities and costs.
- Provide technical expertise and ownership in the diagnosis and remediation of security and privacy issues of the Managed Services offerings, including internal and external technical communication.

- Respond to customer support issues related to these environments.
 - Maintain industry knowledge of the latest trends, technology, and practices.
 - Work with Japanese-speaking technical counterparts from customer teams
-

Required Skills

- 4+ years of hands-on experience in Site Reliability Engineering or DevOps role.
 - Strong experience in maintaining cloud infrastructure.
 - Experience with infrastructure automation and container orchestration tools like- Docker, Kubernetes, Terraform etc.
 - Good understanding of concepts related to computer architecture, data structures and programming practices.
 - Knowledge on any one of - Python, Shell, Go or Java.
 - Strong debugging/troubleshooting skills.
 - Always ready to learn more and adopt new cutting edge technology with the right value proposition
-
