Job Description

The QA Engineer will play a critical role in ensuring the quality of our technology products and systems.

The successful applicant will be responsible for identifying issues, testing software, and reporting on test results.

Client Details

Our client is a mid-sized organization in the Fintech domain.

They are known for their commitment to innovation and the development of high-quality Fintech solutions.

Description

- Proactively contribute to our QA processes in order to strengthen the quality of our products
- Work closely with engineering teams, product managers and other stakeholders to understand technical requirements and provide input on design considerations
- Work with teams to develop test plans appropriate for the scope and scale of our projects
- Execute manual and exploratory tests

- Identify, document, and prioritize defects and issues
- Strengthen our existing test automation tooling
- Building new and innovative test automation solutions

Job Offer

- A competitive salary package
- Opportunities for professional development in Fintech sector.
- A supportive and innovative work environment.
- Generous holiday leave.

Required Skills

- Proficient in at least one programming language
- Hands on experience with automated testing tools like PlayWright, Capybara, and RSpec (though not limited to these)
- Have excellent debugging skills
- Have a tester mindset, are curious, and come up with interesting test scenarios
- Experience with cloud platforms (e.g. AWS)
- Experience with designing release/regression/smoke-testing strategies
- Experience with manual and exploratory testing
- Experience creating and executing test plans
- Business level of English communication

Company Description

Our client is a mid-sized organization in the Fintech domain.

They are known for their commitment to innovation and the development of high-quality Fintech solutions.
