Job Description

This position is available only for people residing in Japan.

[Company Profile]

They are pursuing cutting-edge robot technology based on humanoid robot technology. They have achieved numerous achievements in contract development of intelligent robots that take advantage of Their customers' business characteristics, and are contributing to solving business issues. Another feature is that They can handle both software technology and

hardware technology in collaboration with group companies. Furthermore, by developing new services that utilize robot technology and AI technology, They are taking on the challenge of reducing social issues such as imbalances in employment opportunities and economic disparities.

- Humanoid robot
- Drone
- Mobile robot
- Home robot
- Industrial robot
- FA system automatic machine

[Background of recruitment]

Their remote control products for robots have also built up a number of achievements in contract development of intelligent robots that make use of the business characteristics of each customer.

This product is on track and the number of projects is increasing, so They are looking for PM.

[Attractive points of company/work]

Development engineers vary in age and nationality. Engineers who have a strong desire to "like robot development" are demonstrating their expertise.

It started as a university-launched venture company that handles everything from design and development of robots and IoT systems to sales. What They value is the warmth of an altruistic heart and the excitement of creativity. You want to go further and develop a robot. There is an environment that can meet such wishes.

In addition, experts with high robot technology are active, including the CTO who served as a specially appointed lecturer at the University of Tokyo.

[Job description]

They will entrust you with the PM of Their product.

- Product system planning, design, development, and operation
- Planning, designing, developing and operating commissioned projects
