Permission to work in Japan required

Job Description

- **Development and Operations (PowerShell, Python, .NET)**
- **Enterprise systems/tools for messaging, communications & collaboration**
- **Consultant position dedicated to a Major Global Financial Institution**
- **Location: Tokyo, Japan (Onsite/Hybrid)**

EIRE Systems partners with a major financial institution in Tokyo, providing a team of technical consultants working within the global Windows Operations Group.

The **Infrastructure Developer / DevOps Engineer** role provides Tier 3 operational support for a global Unified Communications and Collaboration systems environment including a variety of tools for chat messaging, desktop sharing,

video conferencing software and telephony systems.

You'll perform a mix of Development and Operations Support work requiring not only systems infrastructure engineering and support skills, but also scripting and development work using agile concepts such as Kanban/Scrum, as we look to further automate many of our processes and end user toolsets.

Technical skills and experience:

We don't expect that you will be an expert in all of the areas below, but the following offers a guide to the types of skills and experience we're looking for.

- Scripting / Development with Powershell, Python or .NET, including ability to create and program against REST APIs
- Windows or Linux System administration - configuration management, entitlement management, software installation
- Fundamental understanding of networking concepts. E.g. experience with Wireshark and network infrastructure tools (firewalls, proxies, load balancers)
- Deploying and administering communications and/or messaging technologies (video/phone/email or chat) in an enterprise environment.
- Familiarity with some of the key platforms - Microsoft Teams, Zoom, Slack, Symphony, Webex
- Deploying applications in cloud based infrastructure (Azure/AWS) that connect to existing on premises systems outside the scope of a single vendor.
- Applying security principles to infrastructure - a combination of detection and resolution of vulnerabilities, conducting application security architecture reviews for newly configured systems

Professional Skills (Soft Skills)

- Advanced, professional level verbal and written communication skills in English - Japanese is not required.
- Ability and desire to learn new technologies quickly and operate in a face paced environment
- Ability to organize and manage work, including project deadlines within a highly demanding environment.
- High sense of personal responsibility and integrity.
- Self-motivated and achievement-oriented with high energy levels.
- "Team player" mind-set, capable of collaborating effectively with colleagues worldwide
- Flexible and innovative
