Job Description

1.) About the company

A leader in digital transformation for the accounting sector are looking to expand their engineering team.

They're an international company, established around 10 years ago, setting out to transform the accounting sector using cutting edge technologies.

Their main product is a cloud service (SaaS) that automates work in the fields of accounting and finance by utilizing AI (deep learning).

This service is attracting a great deal of attention as a service that realizes accounting-DX and the way of accounting in the digital AI age.

2.) Who are you

- You are an experienced Backend Developer.
- You are a self-motivated individual that enjoys working in a team.
- You love building incredible web applications that touch a huge number of users.
- You are fluent in English (Japanese is a plus)

3.) Why you should apply

- Leader in share in the accounting DX and AIxOCR areas, and are involved in AI development for cutting-edge products.
- Have an in-house research and development department, where we collaborate with excellent research scientists and engineers to build original AI models and develop cutting-edge technologies such as generative AI and self-developed LLM.
- They have a talented team coming from Microsoft, UiPath, Works Applications, Accenture, SAP, etc.
- Flat management system.

Required Skills

4.) Requirements

- Around 4 years experience in backend development using either PHP / Golang / Java / Python.
- Experience with database management and SQL database system development
- Familiarity with RESTful API design and microservice architecture
- Familiarity with version control systems (Git)

5.) Nice to have

- Full-stack experience
- Knowledge of the following Cloud services (AWS, GCP, Azure), deployment tools (Docker, Kubernetes), distributed systems and scalability, DevOps practices, Infrastructure as Code (Terraform, etc.), understanding of security protocols and web service security, message queues (Kafka, RabbitMQ, etc.).
