Job Description

We are seeking a **Senior Linux Server Engineer** to lead the development and management of an authentication platform used by thousands of retail staff and partners. This role involves **system performance tuning, automation, and cross-functional collaboration** to ensure a seamless authentication experience.

Client Details

Join a global technology powerhouse known for its dynamic and innovative culture. The company operates across multiple industries, investing heavily in next-generation infrastructure and digital transformation. You'll be part of a team that plays a crucial role in supporting its expanding mobile business.

Description

- Lead the design, development, and operation of an authentication platform for retail and partner systems.
- Conduct performance tuning and capacity planning to ensure system stability and scalability.
- Automate key processes to improve efficiency and reliability.
- Collaborate with stakeholders across different teams to align on system requirements.
- Research and introduce new authentication technologies to enhance security and user experience.

Job Offer

- Work on large-scale authentication systems that directly impact thousands of users.
- A bilingual, multicultural environment offering global career opportunities.
- Exposure to cutting-edge cloud, container, and identity management technologies.
- Freedom to propose and implement new solutions to improve system performance.
- Be part of a company that values innovation and continuous learning.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Naoko Toda at +81 3 6832 8648.

Required Skills

- 5+ years of hands-on experience in Linux server design, deployment, and operation.
- Proven team leadership or project management experience (3+ years).
- Strong knowledge of web systems development and operations.
- Proficient in Bash/Python scripting for automation.
- Business-level Japanese (JLPT N2+) & English (TOEIC 800+ or equivalent).
