### Job Description

#### Company and Job Overview

A prominent company specializing in the manufacturing and distribution of automotive components and accessories is seeking a production engineering senior manager. You will be responsible for driving productivity and efficiency in manufacturing to propel towards Industry 4.0 excellence.

#### Job Responsibilities

- Led the Production Engineering team in creating and deploying advanced tools and jigs to improve productivity and efficiency in plastic injection manufacturing
- Initiate to implement lean manufacturing and drive the organization towards Industry 4.0 transformation
- Maximize productivity and throughput by optimizing and automating processes
- Utilize PLC systems and programming to streamline production operations
- Collaborate with other departments to identify and implement innovative solutions
- Mentor and develop team members, fostering a culture of continuous learning and development in production engineering

#### Job Requirements

- Degree in engineering or any related field
- At least 10 years of experience in plastic-injection related manufacturing

- Proven track record in lean manufacturing and a vision for leading the company towards Industry 4.0 implementation
- Strong expertise in developing tools and jigs to enhance productivity in plastic injection manufacturing
- Capability to strategically reduce manpower through process optimization and automation while boosting productivity and throughput
- Knowledge and experience in PLC (Programmable Logic Controller) systems, with programming skills, is an added advantage
- Familiarity with AI (artificial intelligence) or experience in handling robots is preferable
- Strong technical skills and excellent leadership to lead a team of production engineers
- Effective negotiation skills enable effective manufacturing processes by requesting appropriate resources and solutions from suppliers
- Applicants should be Malaysian citizens or hold relevant residence status
