募集要項

As an iOS Application Development Engineer, you will be responsible for a whole workflow in development projects in healthcare domain.

    System design for new features and enhancement on exiting features, based on functional and non-functional requirements
    Implementation including unit test and continuous technical improvement
    Monitoring after delivery
    Investigation on reported defects
    Trouble shooting

Feasibility study and estimation
Planning for future technical improvement – refactoring and introduction of new tools etc.

Since we just launched our healthcare service, it's start-up phase still and you will be able to demonstrate your competencies beyond an engineer role.

スキル・資格

・Over 2 year experience of iOS native application development using Swift
・Over 4 year professional software development experience in mobile App domain
・Experience on apps communicating with backend servers
・Experience on unit test implementation
・Familiar with modern architecture, best practice and security in mobile App domain
・Strong problem-solving skills to solve complex and uncertain situations
・Motivation to drive things by yourself
・Team work experience and communication skills
・Experience of iOS native application development in healthcare domain
・Experience on apps which communicate with Apple Watch and/or healthcare devices
・Over 5 year experience of iOS native application development
