### 募集要項

We are looking for a software engineer who can lead functionality implementation on multiple applications cooperating with internal stakeholders. The job is mostly focused on hands-on activities including requirement confirmation from business representatives, designing architecture and leading implementation (coding). The role is also expected to provide general improvement in the team for better quality and efficiency.

#### Solution implementation

- Understand requirements from business representative and implement features/functionality aligned to coding and security standard
- Consider and discuss non-functional requirement such as performance, security and monitoring, and apply them to design

and implementation

Code quality responsibility

- Conduct code reviews
- Mentor developers on technical topics within the team

Production support

- Be proactive on issue analysis
- Provide resolution approach, workarounds and bug fixes

Development process improvement

- Assess and propose improvement on internal development standard to bring in better quality and efficiency

---

## スキル・資格

Required Skills and Experience:

- Experience delivering strategic business-enabling applications
- Experience participating in large projects collaborating with regional/global teams and multiple stakeholders
- Strong working knowledge of Java, Oracle, web technologies and Linux
- Experience utilizing DevOps concepts
- Experience with software development on Guidewire Insurance suite is a plus
- Experience in the Japanese insurance industry is a plus

You should be a collaborative and flexible quick action taker who thinks customer-first. You should have very good analytical skills on problems and business requirements. You must be able to communicate effectively with both business stakeholders and other IT members. Rigor on quality and security is a must.

---
