募集要項

Our client is a cutting edge IT subsidiary of one of Japan's biggest retail giants with more than ¥8 Trillion annual revenue.

Fighting problems like labour shortage, global warming and declining infrastructure in remote areas, they have successfully launched Japan's first automated, online-only supermarket.

Making use of high-tech robotics and AI, this service allows for their customers to finish their weekly groceries within as little as 15 seconds!

Responsibilities

- Manage, coach, and support engineering team
 - Implement and monitor technical strategy performance metrics
 - Communicate engineer team goals with engineering staff members
 - Coordinate internal teams to ensure project timelines and budgets are met
 - Formulate strategies for the engineering organization, aligning with business strategies and product roadmaps
-

スキル・資格

Qualifications

- Bachelor's degree or equivalent experience in Computer Science or related field of study
 - Previous work experience as Engineering Manager in a software company
 - Strong interpersonal and communication skills
 - Ability to streamline an engineering organisation and set evaluation metrics
-
