## 募集要項

## Job Summary and Role:

- Align infrastructure operations and service delivery with global strategies; plan and execute IT-BCP initiatives, including internal servers (e.g., AWS), external web/mail servers, network, and domain management.
- Enhance internal productivity and drive digital transformation (DX) through the use of SaaS solutions and groupware.
- Manage the operational processes of the IT Service Desk team and handle vendor management.

## Main Responsibilities:

- Drive tasks linked to various IT projects and manage their progress.
  - Execute tasks aimed at the stable operation of various systems related to infrastructure.
  - Select and promote effective use of groupware among internal users (e.g., MS Teams, Zoom, Zendesk).
  - Facilitate smooth task progression in collaboration with the global IT team, company business units, and Company-IT headquarters.
  - Manage critical services like web servers that interact externally and handle operational changes that occur daily
  - Collaborate closely with the IT Service Desk to perform duties from a company-wide perspective.
- 

## スキル・資格

### Desired Personality, Experience, and Skills:

- Actively keeps up with technology trends and continuously acquires globally-standardized IT knowledge.
- Possesses high communication skills to effectively work with supervisors, teammates, and stakeholders.
- Exhibits excellent self-management abilities, capable of multitasking, prioritizing tasks under tight deadlines, and promptly reporting to superiors when faced with challenges.
- Has knowledge and practical experience in infrastructure/network areas (TCP/IP, DNS, Web/Mail servers, etc.).
- Minimum of 5 years in an information systems department or a related business unit, with an understanding of appropriate conduct in an internal IT position.
- A background in English communication is desirable
