## 【About the company ...】

## &lt;Main Business&gt;

Consulting, testing and development business with a focus on software "quality"

## &lt;Company profile&gt;

The company specializes in quality assurance and testing, which are essential for software development. In order to deliver safe and secure products to the world that is full of software products and can no longer exist without them, they have developed a unique business model to provide quality assurance services across the board, including consulting in the

upstream process of development projects, development work with an awareness of "quality", and testing work just before product release.

They are involved in a wide range of products and services, including enterprise domains such as finance and distribution, and entertainment domains such as web and games, and they participate in projects as a primary contractor under direct relationships with user companies.

In the blue ocean market, where there are no competitors, they continue to achieve an annual sales growth rate of approximately 150% and are creating a virtuous cycle in which employees are rewarded with challenging work and results.

From 2019, the corporate tagline will be "We will show you the change of common sense," and they will be a growing company that is always focused on change and improvement.

## 【 Job Description 】

### ◆ ◆ Recruitment Background

Under the founder's leadership, the division aimed for sales of 300 billion yen and has continued to grow, achieving high sales every year. The division is responsible for creating services that sell and increase productivity in Japan, and has a wide range of recent business themes. These include cutting-edge technology development, regional development, office DX and the use of generative AI. They are looking for a full-stack engineer to lead these projects from a tech perspective, as this is essential.

### ◆ ◆ Your Role

You will form a team with planning members, led by people from strategy firms, and creative members from business companies and production companies, and develop and R&D various products and services from web services to native apps. (You will be involved in the full stack from infrastructure to front-end).

As mentioned above, the division has a variety of development themes. In addition to the founder Tange's ideas, you will also be able to look at the market from a bird's eye view and promote the seeds of ideas for "creating services that sell" as a business.

### ◆ ◆ Attractiveness of this position

- ① Able to take the lead on a wide variety of development themes.
- ② Develop while conversing with specialists in the fields of strategy and creativity, so you can hone your non-technical sensibilities.
- ③ Under the mission of "raising Japan's productivity", you can develop on a grand scale.
- ④ To be involved in the development theme throughout the whole process, you can also witness the product growth.
- ⑤ As an organisation directly under a director, you can work from a position closer to management.

### ◆ ◆ Career Paths

Depending on your orientation, there are endless opportunities to expand your career.

- Leading the development of customer support
- Participation in management
- Head of organisation in a business unit (business and organisational management), etc.

---
