募集要項

(1) Development areas of responsibility of the organization, outline of work, roles and positions within R&D
- Design and experimentation of advanced development and project development of cloud systems for connected cars and services targeting the global market.
- Specifically, (1) next-generation back-end system advanced development, (2) cloud development for connected services

(2) Specific responsibilities and expected roles and positions within and outside your own department
(1) Back-end development in connected cars and services, and (2) Design, experimentation, and project management of project services, to provide competitive connected services required in the global market.

(3) Work environment and working style (member composition, workplace atmosphere, and characteristics)
The team consists of Nissan engineers and partner companies. Many Nissan engineers are mid-career hires from IT and infrastructure companies.
There are meetings with partner companies including offshore companies and regions where connected cars and services are deployed, and there are many opportunities to communicate using English.

＜Appealing points (attractiveness of the job)>
(1) Personal growth, skills acquired, and satisfaction gained through the job
The most rewarding aspect of the job is being able to connect various things to the car and creatively develop new services and new value for customers around the world.
Knowledge of connected cars & services in general, knowledge and skills in cloud system development for vehicle projects, and global and diverse culture and communication skills can be acquired.

(2) Career and position you can aim for in the future
After fostering a career as an engineer in cloud system development for connected cars and services, you can advance to a management position.
*You can also choose another career path within Nissan depending on your desire.
