募集要項

Job Context

The Job exists within the function(s) in charge of developing and governing the Infrastructure Services of UD Trucks while ensuring their delivery and usage, with the ambition to contribute to UD Trucks competitiveness by delivering standardized and fit for purpose infrastructure services, maintaining a balance between time to market, cost and quality.

There are three main service portfolios, each subdivided in a few sub-portfolios: application infrastructure, core infrastructure and end user services. A Service Delivery Leader is typically responsible for one or several services within a sub-portfolio (sometimes, for all services within one sub-portfolio).

Sub portfolios in End User Services which is main scope of Service Delivery Leader - IT Services are as below.

Service Desk

Lead and manage the IT service desk to ensure timely and effective resolution of service requests and incidents, maintaining high levels of customer satisfaction and adhering to service level agreements (SLAs).

HAM and Demand Management

End user hardware life cycle management across UD Trucks and maintain the necessary tools and process related to HAM compliance and audits. Oversee the coordination and fulfilment of end-user IT device and peripheral requirements, ensuring efficient and cost-effective Standard IT equipment catalogues and manage HW CAB processes

Client Services

Manage and support end-user computing environments, including Standard Desktop/Laptop, Factory Workstations, Mobile Device Management, and Virtual Client solutions, ensuring optimal performance, security, and user satisfaction across UD Trucks

Unified Communication and Collaboration

Ensure the effective communication and collaboration solutions, facilitating seamless interaction and productivity across the organization in UD Trucks, while managing service performance and user support.
