#### 募集要項

##### ■Responsibilities:

- Supporting the development of vehicle dynamics, brake control-related parts, hydraulic units, electric boosters, and control design.
- Analysis and design of vehicle dynamics, brakes, chassis systems, and specifications.
- Maintenance and development of both existing production vehicles and new models.
- Development of brake-related parts, system design, and control design.
- Executing tasks with zero margin for error while adding value to deliverables.
- Taking complete ownership of design, validation, and support tasks.

##### ■Position Overview:

The Brake and Chassis Development Engineer will be responsible for the design, development, and validation of vehicle dynamics, brake systems, and chassis components. This position involves working closely with various teams to ensure the successful integration of advanced vehicle dynamics control systems, while maintaining a focus on safety and performance.

The role requires hands-on experience in system design, control development, and the ability to manage tasks with zero margin for error, while adding value to deliverables.
