募集要項

COMPANY & JOB OVERVIEW:

This bank, established in Malaysia in 2010, offers a comprehensive range of financial services including corporate finance, trade finance, forex and derivatives, cash management, and Islamic finance. It supports economic and trade exchanges between Malaysia and Japan, leveraging a global network to facilitate cross-border business growth. The bank is committed to providing tailored financial solutions to meet diverse client needs.

JOB RESPONSIBILITIES:
- Define and oversee the project scope.
- Engage in low-code development, with expertise in C# MVC and ASP.NET for web applications, including functional design, prototyping, testing, and other implementation tasks.

- Proficient in SQL Server, IIS, and Windows Server.

- Skilled in API development and integration (RESTful services, SOAP).

- Identify and address project issues, managing risks effectively.

- Control project timelines and resources.

- Support, analyze, and resolve reported issues and service requests.

- Prepare and maintain project and quality plans, tracking activities against the plan and providing regular, accurate reports.

- Understand the impact on processes, people, and technology.

- Ensure quality control measures are in place.

- Escalate project issues when necessary.

- Participate in project meetings to provide clarity and guidance between stakeholders and vendors on the functional solution design specifications.

- Develop test cases and scripts to verify that delivered IT systems meet the specified functional solution design.

- Analyze, assess impact, prioritize, and update the functional solution design document for any additional change requests from business users.

- Work actively with stakeholders to ensure compliance with policies and business rules.

- Develop functional solution design specifications that incorporate features and flows meeting the bank's compliance, security, and data governance policies and standards.

- Manage and support BCP/DRP activities, review penetration test results, and collaborate with vendors to resolve or mitigate risks.

JOB REQUIREMENTS:
- Must hold a professional certificate, diploma, or degree in Computer Science, Information Technology, or a related field.

- At least 3 years of experience in software development/support or IT project management.

- Strong analytical, troubleshooting, and problem-solving abilities.

- Excellent interpersonal and consultative skills.

- Innovative, creative, and analytically strong personality.

- Relevant experience in product/platform development and management, business process improvement, and project management.

- Capable of working independently with minimal supervision
