募集要項

In-Vehicle Brake ECU Development Engineer

Location: Honatsugi

Japanese Level – N3 and above

Responsibilities:

- Develop detailed design specifications for in-vehicle brake ECU systems.
 - Create and validate simulation models using MATLAB/Simulink to evaluate system performance and optimize control strategies.
 - Design and implement control algorithms, including PI control, for precise control of hydraulic valves, motors, and other actuators.
 - Develop embedded software for the ECU, including coding, testing, and debugging.
 - Conduct rigorous testing and validation of ECU functionality, performance, and safety.
 - Analyze test data to identify areas for improvement and optimize system performance.
 - Collaborate with cross-functional teams, including hardware engineers, system engineers, and test engineers, to ensure seamless integration of the ECU into the vehicle.
 - Stay up-to-date with the latest advancements in automotive technology and industry standards.
-

スキル・資格

Required Skills:

- Strong experience in developing chassis-based vehicle ECUs, particularly brake systems.
- Proficiency in C programming language for embedded systems.
- Expertise in MATLAB/Simulink for simulation and modeling.
- Solid understanding of control theory, including PI control and other advanced control techniques.
- Knowledge of hydraulic systems and actuator control.
- Strong analytical and problem-solving skills.
- Excellent communication and teamwork abilities.
- Fluency in English, both written and spoken.

Desired Skills:

- Experience with model-based design and development.
 - Knowledge of automotive standards and regulations, such as ISO 26262.
 - Experience with tools like CANalyzer, VectorCAST, and other relevant software.
-
