募集要項

We are seeking a dedicated FullStack developer to join our technology team in the retail industry, creating and maintaining web applications that enhance our customer experience.

Client Details

The company is a large organization, a part of the retail industry, and headquartered in Tokyo. Known for its commitment to innovation and excellence, it delivers superior services and products to its customers through its robust technology department.

Description

- **Lead and Inspire:** Oversee a team of engineers, promoting Agile practices and facilitating Scrum ceremonies to ensure smooth workflow and continuous improvement.
- **Technical Oversight:** Ensure the delivery of high-quality software by managing code reviews, ensuring adherence to best practices, and overseeing both front-end and back-end tasks.

- **Full-Stack Development:** Contribute to technical design and actively participate in the development of both the front-end and back-end systems, using tools like React and the Spring Framework to deliver efficient solutions.
- **Process Improvement:** Help refine and streamline development processes, ensuring robust and scalable solutions that optimize logistics and supply chain operations.

Job Offer

- Long-term renewable haken contract
- Potential to covert permanent employee in the future
- Competitive salary
- Attractive benefits
- International work environment
- Work hours: 9:00~17:30 Monday to Friday

Take the next step in your career as a Mobile Developer in the retail industry in Tokyo. Apply today!

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Hikari Takamura on +813 6832 8903.

スキル・資格

A successful fullstack Developer should have:

- Strong experience in leading Agile teams and driving development best practices.
- Proficiency in front-end technologies (React) and back-end frameworks (Spring Framework).
- Solid experience with mobile app development, including Android SDK, and building RESTful services.
- Hands-on experience with databases (SQL, NoSQL, Redis) and CI/CD tools (e.g., Jenkins), as well as code quality tools (SonarQube).
- Familiarity with testing frameworks like JUnit and Jest, and experience in process documentation (JIRA, Confluence)
