募集要項

Company and job overview

Our client is an IT company.

Job Responsibilities
- Contribute to developing company software products by combining your technical expertise and team leadership skills.
- Hands-on development, actively participating in developing and maintaining software products, ensuring code quality through code reviews, pair programming, and contributing to the codebase.
- Training of development organization members through 1-on-1, evaluation feedback, etc.
- Collaborate with product and engineering teams to design, architect, and implement scalable software solutions that align with business goals.
- Promote engineering recruitment and external PR activities.

Job Requirements
- Experience as a development team manager with leadership and results generation.
- Track record of being an Engineering Manager for product teams to drive the desired result from complex requirements.
- Experience developing and operating products as a software engineer with hands-on coding, with the ability to create, contribute to, and review complex codebases.

- Experience with technology verification, requirements analysis, architecture design, and infrastructure construction for development teams or multiple projects.
- Experience in driving Scrum and Agile development processes.
- Fluent business communication skills in English.
